

Boney Mechery

JAVA BACKEND DEVELOPER

boneybabu77@gmail.com | 7719834436 | [linkedin.com/in/boney-babu-mechery](https://www.linkedin.com/in/boney-babu-mechery) | github.com/Boney77

SUMMARY

Results-driven Java Backend Developer with hands-on experience building scalable REST APIs, high-concurrency systems, and cloud-integrated applications. Proficient in Spring Boot, microservices architecture, AWS, and MySQL/MongoDB. Demonstrated ability to architect backend engines handling 10,000+ concurrent users, integrate IoT pipelines with AWS, and apply machine learning to real-world fraud detection. AWS-certified with strong foundations in system design, DSA, and Agile methodologies.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL

Backend: Spring Boot, REST APIs, Microservices, Concurrency Handling, Backend System Design

Databases: MySQL, MongoDB

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, CloudWatch), Docker, Jenkins, CI/CD Pipelines

Core Concepts: OOP, DSA, SDLC, Agile/Scrum, Git, GitHub

PROFESSIONAL EXPERIENCE

Graduate Engineer Trainee - Quanzen

Jan 2026 - Present

- Developed Java backend modules and RESTful APIs for internal enterprise applications, improving operational workflows.
- Performed database operations, API testing, and systematic debugging to ensure system reliability and performance.
- Collaborated with cross-functional teams following Agile/Scrum and SDLC methodologies throughout delivery cycles.

PROJECTS

OrderFlow — Flash Sale & Inventory Reservation Engine

Java · Spring Boot · Redis · MySQL

- Engineered a high-concurrency backend engine processing 10,000+ simultaneous users during flash sales with zero data inconsistency.
- Designed atomic inventory reservation logic using Redis to prevent overselling under peak traffic load.
- Built RESTful APIs for full order lifecycle management — stock validation, reservation, and transactional processing.

AI-Based Insurance Fraud Detection System

Java · Spring Boot · REST APIs · MySQL

- Built a fraud detection system to identify suspicious insurance claims with real-time risk scoring and automated fraud flagging.
- Developed scalable Spring Boot REST APIs and analytics workflows integrating prediction results with risk scoring dashboards.
- Reduced manual claim investigation effort by automating pattern-based fraud detection at scale.

IoT-Based Fire Detection System with AWS Integration

ESP32 · AWS Cloud · Blynk IoT

- Architected an end-to-end IoT fire detection system with ESP32 sensors and real-time cloud data streaming via AWS.
- Implemented cloud-side sensor processing, threshold alerting, and remote monitoring dashboard using Blynk IoT.
- Enabled proactive incident response with instant alerts, significantly reducing potential emergency response time.

EDUCATION

B.E. — Artificial Intelligence & Data Science

Fr. Conceicao Rodrigues College of Engineering, Mumbai

SGPA: 8.68 | 2022 – 2026

Class XII — 84.17%

Boys Town Junior College (MH Board)

Class X — 81.20%

Sacred Heart Convent High School (MH Board)
